

Dear Colleagues and Readers!

Welcome to the 100-th issue of the Siberian Journal of Oncology. The first issue was published in 2002. Over the years of the journal's existence in the print world, more than 3000 articles have been published on its pages, widely covering current problems in cancer. Their geography is extensive and includes almost all regions of Russia, countries of near and far abroad. Currently, the Journal is published not only in the printed version, but also in electronic form on the website with open access to research publications that increases the interest of the scientific community in Russia and other countries.

Siberian Journal of Oncology and its thematic content developed together with science itself, highlighting topical issues of fundamental and clinical oncology: epidemiology, molecular genetic analysis, carcinogenesis, prevention, comprehensive diagnostics, modern high-tech tumor treatment, anesthetic management, medical and social rehabilitation, palliative care and quality of life of cancer patients.

High-quality research papers published in the Journal have been written by highly talented and professional authors, famous oncologists, as well as young scientists, who are participants in Russian and international grants. An important factor of scientific authority is that the reviewers of the Journal are recognized scientists from higher educational

institutions and research institutes of biomedical and oncological profiles.

At present, the Siberian Journal of Oncology is steadily positioned as one of the recognized scientific and practical publications included in the List of peer-reviewed scientific journals, in which the main scientific results for the Ph.D. degree should be published. The journal is included in the core of the national bibliographic database of the Russian Scientific Citation Index (RSCI) on the Web of Science platform, indexed in the Scopus database, included in the EBSCO database. This is the great merit of the editorial board of the Journal, which includes prominent scientists from Russia and other countries.

But we do not stop there. The development program of the journal includes increasing the number of original articles in English, expanding the pool of reviewers, increasing the level of citation in international bibliographic databases, and further promoting the journal to the international scientific community.

I wish you, dear colleagues, many interesting ideas and projects, great creative achievements, which, I hope, will be embodied in excellent scientific articles.

We are looking forward to continuing our successful cooperation!

Prof. E.L. Choynzonov
Editor-in-Chief

A handwritten signature in blue ink, which appears to read 'E. L. Choynzonov'.
